

Interkokask RTU

500ml

Interkokask RTU is available to the public via the veterinary surgeon.

- Effective disinfection against bacteria, viruses and fungi, mites and mite eggs, worms and worm eggs, coccidial oocysts and cryptosporidium

It is a development of the commercial disinfectant Interkokask which has been approved by DEFRA in the UK, and to the German DVG and European hygiene standards.

General properties

Clear liquid. A blend of Acidic Phenol and 4-chlorine-3-methylphenol.

Active ingredients

Chlorocresol.

Instructions for use

Interkokask RTU is a surface disinfectant and should NOT be used while the animals or birds are present in the housing. The disinfectant should be left in contact with the surface housing for up to 2 hours and ideally allowed to dry.

500mls of Interkokask RTU is sufficient to cover approximately 5m², 1kg Interkokask concentrate will treat up to 125m² (see separate product which needs diluting before use).

1. Remove all bedding, feed, drinking equipment, etc.
2. Clean surfaces thoroughly to remove any loose dust, dirt and manure.
3. Apply Interkokask RTU from a distance of 30cm (12 inches) so that the surface is wet. Be sure to treat all cracks, crevices and holes.
4. Leave for 30 minutes if treating against bacteria, viruses or fungi, otherwise leave for 2 hours. Rinse the surfaces with clean water.

Precautions

- Usual safety precautions should be observed when handling chemicals.
- If swallowed seek medical advice immediately and show this leaflet.

- This product and its container must be disposed of safely.
- The bottle must be transported and stored upright.
- Protect from frost.
- Avoid direct contact with cats and fish.
- Do not spray onto furniture or soft furnishings.

Can also be used for disinfecting.

Dog kennels/runs/yards, rabbit/guinea pig hutches, small animal cages, pigeon lofts, chicken houses, dovecotes and vivariums.
