

# Anti-Peck Spray

*Effective solution to prevent feather pecking, cannibalism and anti-social behaviour in poultry.*

- Food safe
- Non-tainting
- Non-staining

Chicken Vet Anti-Peck Spray has been carefully formulated to curb the anti-social feather pecking poultry can display to other birds. Birds are often bullied by the hierarchy (pecking order) of the flock. This can range from minor feather pecking to more extreme cases of aggressive behaviour, cannibalism and eventually death.

## Presentation

A clear liquid with a faint odour in a spray bottle ready to use. Contains bitterex which is a strong and bitter tasting product which deters feather pulling and eating.

## Instructions for use

1. Spray on the affected area of the victim(s)
2. Continue to use for at least 7 days.
3. Repeat if required.
4. Spray all birds in the flock if necessary to prevent the problem becoming a wide spread habit.

Avoid contact with eyes.

## Pack Size

250ml.
