

Red Top Fly Trap

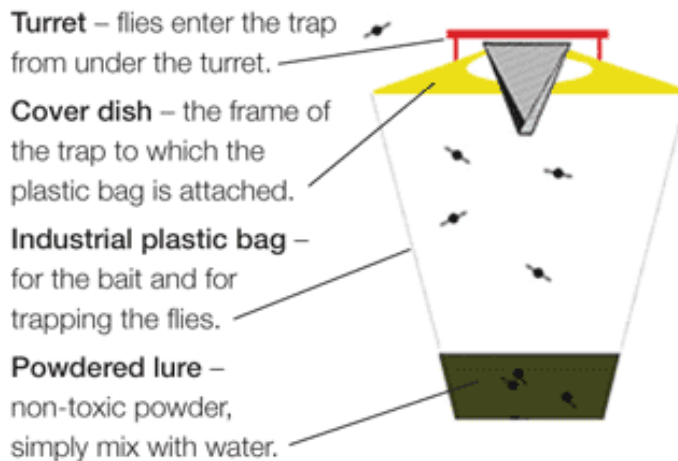

How it works

Red Top Fly Traps are safe, effective and easy to-use.

They use a non-toxic, protein based bait which lures flies through a turret into a three litre trap from which they can't escape.

Around 85% of the flies caught in the trap are female. By controlling the female, the entire fly population in the area can be brought under control. Once caught the flies cannot escape and the flies cannot build immunity to the bait.

Red Top Fly Traps are ideal for both home and commercial use. They should be situated a maximum of 15 metres away from your home, farm building or business premises so to draw the flies away from the premises and into the trap.

Full instructions are within the pack.
