

Biostop

A herbal product to help maintain and support intestinal upset

Biostop is specially formulated for administration to all species and commercial breeds of poultry at times of intestinal upset. It can be particularly effective when difficulties are encountered during antibiotic therapy.

- No egg withdrawal period

Composition

Mixture of flavouring compounds, thymol, glycerine, sorbitol, propylene glycol

Contents

Extract of Silybum Marianum (CoE551)	Thymol
Tannis Acid	Sorbitol (E420)

Instructions for use

Put in drinking water at a rate of 5ml/10 litres for 3 - 10 days.

How does Biostop work?

- Supports the gut during times of diarrhoea.
- Due to its astringent properties, it creates a layer of denatured protein on the surface of the intestine wall, which stops the effusion of water and electrolytes to the intestinal lumen.
- It reduces absorption of free non-protein toxins from alimentary tract, while bonding protein toxins (mostly bacterial ones) into insoluble conglomerates, which are removed through the enteral route.
- It stabilises the increased peristaltic motions that accompany intestinal upset.
- It normalises the state and the activity of intestine mucous membrane.

Pack Size: 100ml.
